PROFILE

Electrical Engineering graduate with internship exposure to electronics and UPS/converter systems. Academic experience in sensor acquisition, signal processing, and laboratory assistance. Seeking entry-level electrical maintenance, testing, engineering, or technical support opportunities.

EDUCATION

Diponegoro University, Semarang | Bachelor of Engineering in Electrical Engineering

Graduated 29 September 2026 | GPA 3.43/4.00 | Graduation confirmation letter available

EXPERIENCE

PT Angkasa Pura Indonesia | Internship Trainee | Jul - Aug 2025

- Gained practical exposure to UPS and converter systems at Soekarno-Hatta International Airport.

Redesma Technologies | Electronics Technician | Jan - Feb 2025

- Worked on electronics tasks involving IoT temperature monitoring and DC motor control.

Diponegoro University | Basic Electronics Practicum Assistant | Feb - Jun 2025

- Assisted students with basic electronics laboratory activities and electronic components.

SELECTED PROJECTS

EMG Acquisition and Signal Processing | Undergraduate Final Project | 2026

- Developed the EMG acquisition and processing subsystem using SEN0240 and STM32F411CEU6 within a team rehabilitation-hand project.
- Implemented 4 kHz ADC acquisition, digital filtering, RMS/MAV extraction in 100 ms windows, and UART communication in C.
- Documented the processing pipeline, analysis methods, and test limitations. Individual scope covered EMG processing and communication.

Anak Kos Survival | Personal Browser Game | 2026

- Directed an AI-assisted JavaScript browser game with a seven-day loop, resource decisions, autosave, and multiple endings.
- Verified 42 automated tests across gameplay rules, checkpoints, portfolio content, and movement logic on 7 October 2026.

TECHNICAL SKILLS

Electronics fundamentals, UPS/converter exposure, sensor acquisition, C, STM32, ADC, UART, technical documentation, Microsoft Office.

Currently exploring AI-assisted development and AI-agent workflows.
